

To invoke, run:

```
./configure.sh  
make  
make test
```

Assumptions:  
none

Things we want to know:

We handle newlines and indents higher up in the AST to reduce code duplication as much as you allow with your restrictions on how much we can edit the ast.java file. We also updated the implementation of DeclListNode to use a for-each loop and generics instead of the old Java 4 style looping.
